

citi

We fund global warming.

While the world is calling for immediate action to confront climate change, reduce greenhouse gas emissions, and end our reliance on dirty energy – Citi is continuing to use our money to invest in the most destructive and polluting industries.

COAL IS:

- Responsible for a **third of US greenhouse gas emissions** (2 billion tons/year)
- The largest source of toxic mercury contamination.
- Killing us - power plants are a leading cause of asthma, respiratory disease, and lung cancer, responsible for over **24,000 deaths annually**.
- Destroying ecosystems and communities. Mountaintop removal coal mining has destroyed over 450 Appalachian mountains, buried thousands of miles of streams, poisoned water supplies, and devastated local communities.

LONG ON TALK, SHORT ON ACTION

Despite millions spent on “green” marketing, Citi is still the top financier of dirty energy - 200 times as much as they spent on alternative energy last year.

Citi has made headlines for its pledge to "reduce our carbon emissions by 10% from our 2005 level by 2011" But don't be fooled - Citi is only talking about their internal operations, not their investments. **A single coal-fired power plant will negate their emissions reductions from every single office in just 2 weeks of operation.** And Citi is financing dozens of dirty plants across the country.

There are currently 150 new coal-fired power plants proposed in the US. Together, these plants would emit more than 600 million tons of additional CO2 annually - the equivalent pollution of adding 100 million cars to our roads. With an expected life-time of 50 years, these plants will negate every other effort to combat climate change. If we are serious about maintaining our atmosphere, keeping our communities safe, and our economy strong – **it's time to say no to coal.**

citi

We fund global warming.

- **ACCELERATING CLIMATE CHANGE**

In 2006, Citi was the top underwriter for the coal industry - with twice the amount of coal money issued as its closest competitor. Citi arranged a \$37 billion loan for the buyout of top Texas polluter TXU, and is the lead underwriter for companies like **Dynegy, Dominion, NRG, Florida Power and Light, Southern, American Electric Power** and many more.

- **DESTROYING APPALACHIA'S MOUNTAINS**

Mountaintop removal is the highly destructive mining process that literally explodes the tops off of mountains. It has led to the loss of thousands of square miles of Appalachian forests and mountains and the devastation of Appalachian communities. Citi is financing billions of dollars to companies that practice MTR, including **Massey Energy, Arch Coal, Alpha Natural Resources, Foundation Coal** and many more.

- **VIOLATING HUMAN RIGHTS**

Citi has provided billions to **Peabody Energy**, the largest coal mining company in the world. For 40 years, Navajo and Hopi communities in Arizona have been ravaged by **Peabody Energy's Black Mesa** mine, which affects the land rights of thousands of families, drains 2.5 million gallons daily from the only community water supply and has left a toxic legacy along a 273-mile coal slurry pipeline.

By transitioning to a clean energy future that prioritizes energy efficiency and clean renewable sources like solar and wind power; we can meet our energy needs, build a stronger economy, keep our communities healthy, and curb climate change. Don't let Wall Street hold us back.

COAL IS OVER! FUND THE FUTURE!
